- Addition of many Quality of Life Features - Playable in one place: "Eden Ring" A new world where a vast open field and a dungeon of complex and three-dimensional design appear seamlessly in the world. - Monster elimination You can team up with your party to kill monsters. - New battle system Devise a new battle system that balances skill-based attacks and passive defense. - Variety of combinations You can freely combine the weapons and armor you equip. - Zones for various jobs You can classify the difficulty level of the areas you fight in. - New Warrior of Eros class New characters and progression system.[Anesthetic techniques in endoscopic sinus surgery]. A revision of endoscopic sinus surgery is presented, and a review of the relevant studies that address anesthetic techniques and endoscopic sinus surgery is done. To determine the relevance of the literature findings, a MEDLINE search was performed on the topic of endoscopic sinus surgery and anesthesia. The most common complications of endoscopic sinus surgery and the conventional technique are, respectively, hypoxia and postoperative airway complications. There are many studies on the use of topical and systemic topical anesthesia in endoscopic sinus surgery, but only a few studies on regional anesthesia. There is evidence that patient-controlled epidural analgesia is superior to conventional analgesia for endoscopic sinus surgery, and the results of studies on regional anesthesia and its use with topical anesthesia are promising. Regarding the technique of inhalational anesthesia, there is evidence that methohexitone and thiopentone are safe in the ASA-1 class of patients, while propofol should be avoided. Other techniques and possibilities of anesthetic techniques are discussed.Q: Generic Repository interface I am still new to C# and trying to get myself up to speed with the framework. I am using Entity Framework 5 with the code-first approach. My question is about designing a generic repository. I have a user-interface system that I'm building and I wanted to separate out all my data entities (user information, customer information, etc) into their own classes (user, customer, etc) and have this "API" for getting or setting information for each entity. So my data model looks like the following: What I'm trying to do is have a Generic Repository Interface for getting and
