Buy Stellar Converter for MBOX right now!A typical application of PLLs is in a radio receiver, where the PLL can be used to generate a fine clock signal (e.g. 32 kHz) for further processing and/or for generating a jitter-free clock signal at the frequency of the received signal. A PLL generates a PLL clock by multiplying the input signal by the Nth power of a reference frequency signal, where the reference frequency signal may be a crystal-controlled oscillator or a voltage-controlled oscillator. The output of the PLL can be passed through a low-pass filter to provide the desired frequency. However, the performance of such a PLL is limited to a predetermined bandwidth. In addition, the reference frequency signal is limited to a predetermined range and is susceptible to noise. As such, there exists a need for an improved PLL circuit.Q: PowerShell: Convert XML to JSON and get JSON as an output I'm relatively new to PowerShell and I have an XML file in this format:
